RiskOS — Comprehensive Enterprise System Documentation

Enterprise Risk Management (ERM) SaaS Platform Architecture, Design System, User Flows & Engineering Specification

---

1. Executive Summary & System Vision

1.1 Platform Mission

RiskOS is a next-generation Enterprise Risk Management (ERM) SaaS platform engineered for financial institutions, highly regulated tech enterprises, and global organizations. RiskOS bridges executive risk governance with frontline operational realities, transforming static compliance checkboxes into an active, data-driven operational control system.

1.2 Regulatory & Industry Framework Alignment

RiskOS is natively modeled against the gold standards of international governance and enterprise resilience:

- **COSO Enterprise Risk Management (2017)**: Integrating with Strategy and Performance.
- **ISO 31000:2018**: Risk Management Principles and Guidelines.
- **ISO 27001:2022 & SOC 2 Type II**: Security, Availability, and Confidentiality Trust Services Criteria.
- **NIST Cybersecurity Framework (CSF 2.0)**: Govern, Identify, Protect, Detect, Respond, Recover.
- **Digital Operational Resilience Act (DORA)**: Stringent ICT operational risk, third-party vendor oversight, and mandatory recovery time objectives (RTO/RPO).
- **Basel III / BCBS 239**: Risk data aggregation and risk reporting standards.

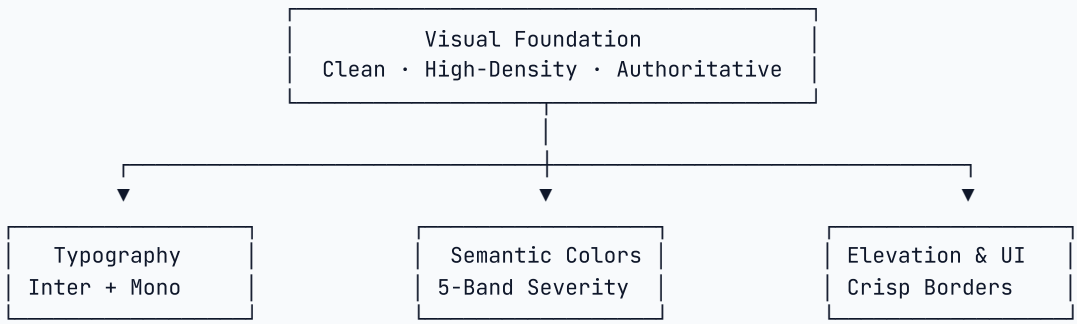

1.3 Key Stakeholder Personas & Value Drivers

Persona	Role	Core Objectives in RiskOS	Primary Workspaces
Chief Risk Officer (CRO)	Executive Risk Governance	Macro portfolio exposure, appetite breach monitoring, Board risk pack reporting, capital allocation.	`dashboard-executive`, `reports-board`, `org-appetite`
Head of Operational Risk / VP IT	Operational Resilience	Incident containment, RTO/RPO failover drill verification, infrastructure telemetry, KRI tracking.	`dashboard-operations`, `incidents`, `scenarios-kris`
Risk Owner / Department Lead	Line 1 Risk Mitigation	Documenting risks, executing remediation action plans, completing periodic risk reviews.	`my-work`, `risks-all`, `assess-RSK-1042`
Control Owner / Compliance Manager	Line 2 Internal Controls	Designing preventive/detective controls, testing operational effectiveness, managing deficiencies.	`controls-library`, `controls-testing`, `frameworks-iso27001`
Head of Internal Audit	Line 3 Independent Assurance	Maintaining audit universe, sampling operational controls, logging findings, verifying evidence packages.	`audits-plan`, `audits-evidence`, `issues`

---

2. Design System & Style Guide

RiskOS employs an authoritative, high-density, low-fatigue design language inspired by modern developer and enterprise benchmarks (Linear, Stripe, Vanta, and Apple Human Interface Guidelines).

2.1 Design Principles

1. **Clarity Over Clutter**: Generous whitespace, precise typography, and intentional visual hierarchy prevent cognitive overload when evaluating high-stakes financial and cyber risks.
2. **Context-Preserving Depth**: Drawers, collapsible sidebars, and progressive disclosure patterns allow users to inspect granular telemetry without navigating away from their mental context.

3. **Color as Data, Not Decoration**: Color is reserved strictly for status, risk severity bands, control effectiveness, and action urgency. Neutral backgrounds prevent visual fatigue.
4. **Instant Tactile Feedback**: Optimistic UI updates, animated progress indicators, and tactile micro-interactions provide confidence during audit-critical operations.

2.2 Typography System

The typography pairs **Inter** (humanist sans-serif for high legibility in UI copy) with **JetBrains Mono** (monospaced for codes, IDs, monetary amounts, and matrix coordinates).

Token / Usage	Font Family	Size	Weight	Tracking	Example
Display Header	Inter	`24px` (`text-2xl`)	Bold (`700`)	`-0.025em`	Executive Risk Dashboard
Section Header	Inter	`16px` (`text-base`)	SemiBold (`600`)	`-0.015em`	Key Risk Indicators (KRIs)
Card / Item Title	Inter	`14px` (`text-sm`)	SemiBold (`600`)	`-0.01em`	Cybersecurity Breach
Body Text	Inter	`13px` (`text-xs`)	Regular (`400`)	Normal	"Critical technology and third-party..."
Caption / Helper	Inter	`11px` (`text-[11px]`)	Medium (`500`)	Normal	"Last assessed Sep 28, 2026"
Identifier / ID	JetBrains Mono	`12px` (`text-xs`)	SemiBold (`600`)	Normal	`RSK-1042` , `CTL-002` , `INC-2026-88`
Metric Value	JetBrains Mono	`24px` (`text-2xl`)	Bold (`700`)	`-0.02em`	`99.94%` , `$4.8M` , `14.2h`
Score / Ratio	JetBrains Mono	`11px` (`text-[11px]`)	Bold (`700`)	Normal	`16/25` , `22/25`

2.3 Semantic Color System & Risk Severity Scale

RiskOS implements a standard **5×5 Risk Severity Scale** mapped to ISO 31000 and institutional banking standards:

```
Score: Likelihood (1–5) × Impact (1–5) = 1 to 25
```

Severity Band	Score Range	Color Token	Foreground	Background	Border	Action Required
Critical	`17 – 25`	Rose	`text-rose-700`	`bg-rose-50`	`border-rose-200`	Immediate board escalation; mandatory daily containment
High	`10 – 16`	Amber	`text-amber-700`	`bg-amber-50`	`border-amber-200`	Executive mitigation plan within 14 calendar days
Moderate	`5 – 9`	Yellow / Amber	`text-amber-800`	`bg-amber-50/50`	`border-amber-100`	Department-level remediation; 30-day review cycle
Low	`1 – 4`	Emerald	`text-emerald-700`	`bg-emerald-50`	`border-emerald-200`	Accepted residual risk; periodic annual review

Control Effectiveness Color Scale

- **Effective**: `bg-emerald-50 text-emerald-700 border-emerald-200` (Reduces score by 60–80%)
- **Partially Effective**: `bg-amber-50 text-amber-700 border-amber-200` (Reduces score by 30–50%)
- **Ineffective / Gap**: `bg-rose-50 text-rose-700 border-rose-200` (0% reduction; logged deficiency)

2.4 Surfaces, Elevation & Borders

- **Page Canvas**: `#F8FAFC` (`bg-slate-50/60`) — clean, low-glare canvas.
- **Surface Containers**: `#FFFFFF` (`bg-white`) with subtle border `border-slate-200/80` and `rounded-xl`.
- **Elevated Overlays / Modals**: `bg-white`, `border-slate-200`, `shadow-2xl`, with backdrop `bg-black/50 backdrop-blur-xs`.
- **Interactive Hover States**: `hover:border-slate-300 hover:shadow-xs transition-all duration-150`.

---

3.1 Primary UI Primitives

`Button` (`src/components/ui/button.tsx`)

- **Variants**: `primary` (slate-900 / blue-600), `secondary` (white / slate-200 border), `ghost`, `danger` (rose-600).
- **Sizes**: `sm` (h-7, text-xs), `md` (h-8.5, text-xs), `lg` (h-10, text-sm).
- **States**: Supports icons, active loading spinner, disabled state, and keyboard focus rings.

`Badge` (`src/components/ui/badge.tsx`)

- Supports status dots (`animate-pulse` for active alerts), monospaced coordinates, and semantic color pairings.

`GlobalSearch` (`src/components/ui/search.tsx`)

- Activated via `⌘K` or top-bar search input.
- Searches across Risks, Controls, and Team Members.
- Direct routing into target risk dossiers (`risk-RSK-1042`), control library, or profile.

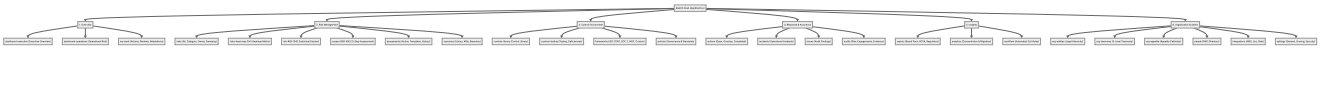

`Matrix5x5` (`src/risk-matrix/components/HeatmapGrid5x5.tsx`)

- Full 5×5 SVG / CSS grid mapping Likelihood (Y-axis: 1 Rare to 5 Almost Certain) against Impact (X-axis: 1 Insignificant to 5 Catastrophic).
- Dynamic coordinate calculation: Score = $L \times I$.
- Supports coordinate drill-down filtering risks within each specific coordinate.

---

4. Information Architecture & Complete Route Map

The RiskOS navigation tree is organized into **7 top-level domains** containing **40+ fully implemented routes**:

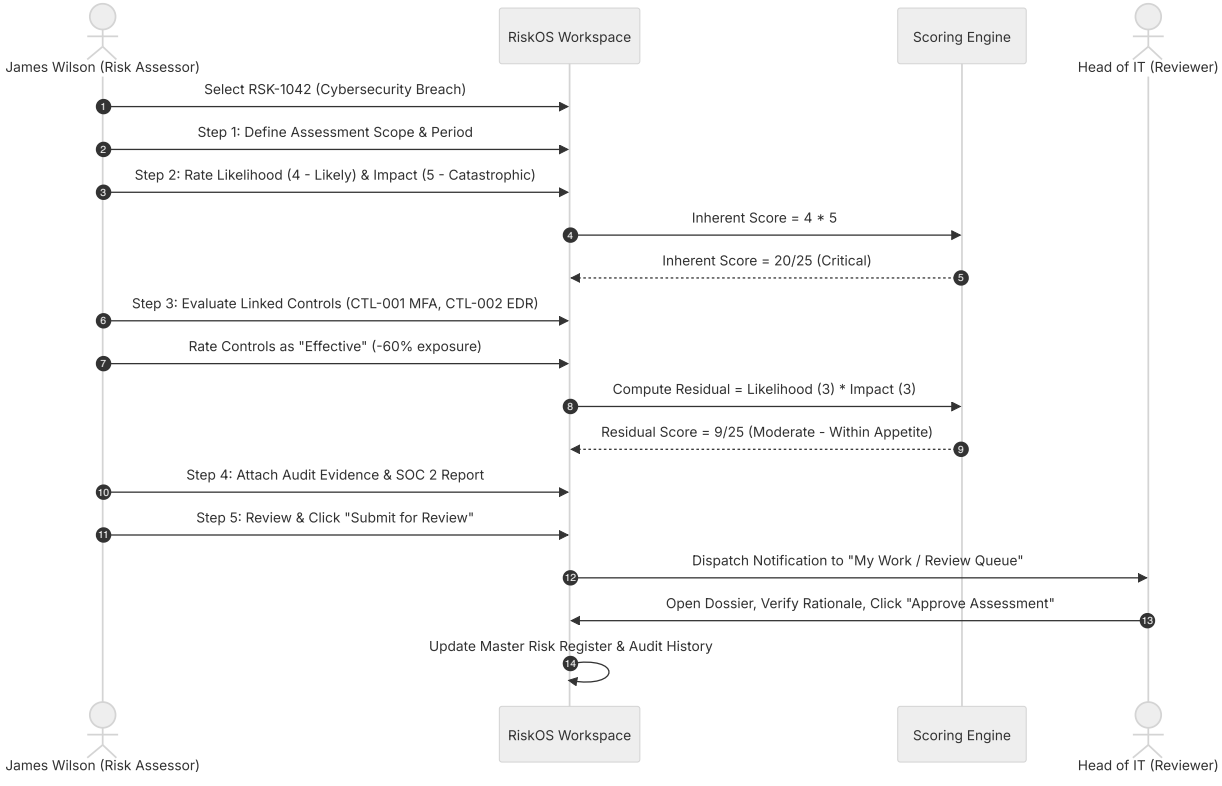

---

5. End-to-End User Flows & System Lifecycles

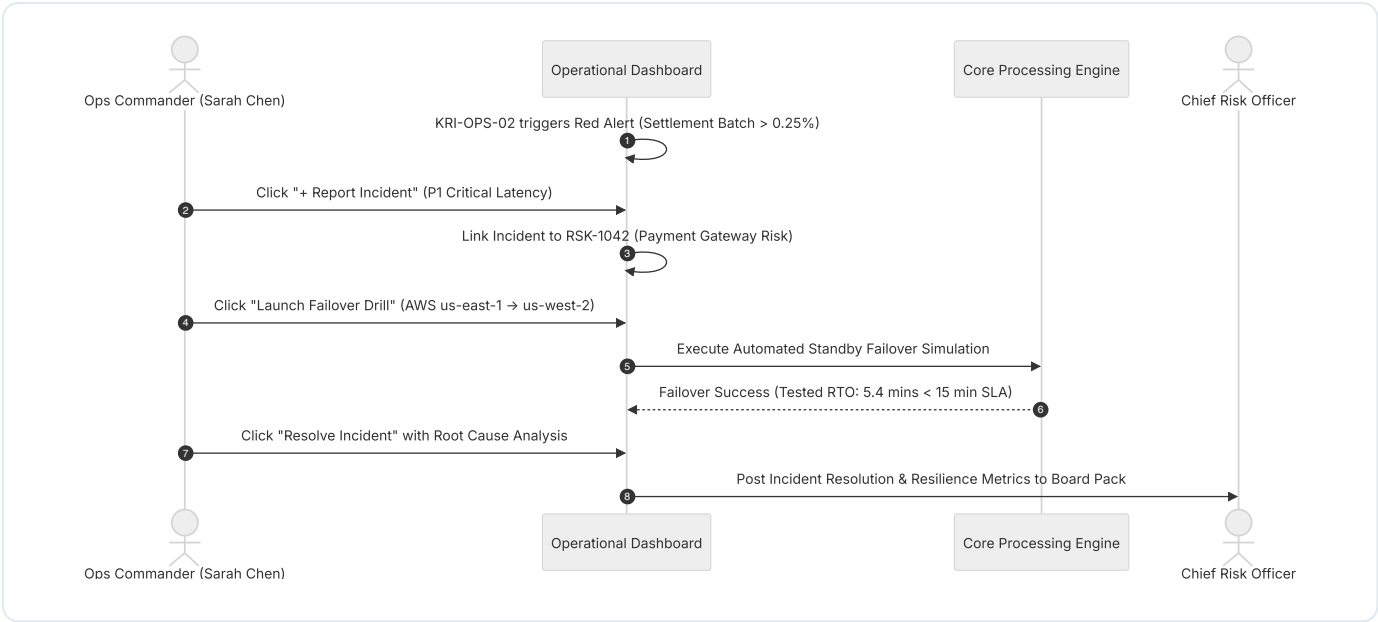

Flow 1: Risk Assessment Lifecycle (RSK-1042 Journey)

From identification to residual risk sign-off:

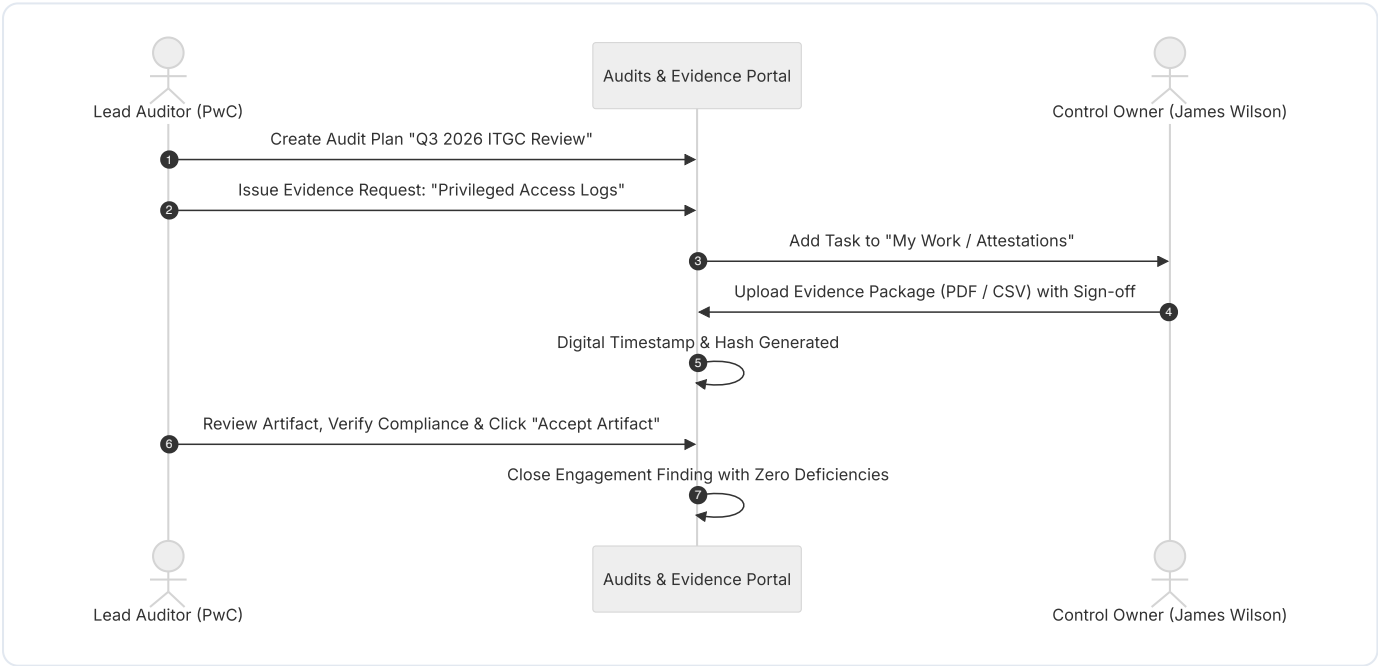

Flow 2: Operational Incident & Telemetry Failover

Continuous monitoring and DORA compliance:

Flow 3: Internal Audit Engagement & Evidence Portal

Third-line defense evidence gathering:

---

6. Prototyping & Functional Capabilities Specification

Every workspace in RiskOS is interactive and data-driven:

6.1 Executive Dashboard (`ExecutiveDashboard.tsx`)

- **Live KPI Counters**: 248 Total Risks, 12 Critical, 38 High, $4.8M Residual Exposure (-8.2% vs previous quarter), 82% Control Effectiveness.
- **Interactive 5×5 Matrix Preview**: Hovering coordinates displays frequency; clicking coordinates drills down into filtered risk tables below.
- **Risk Detail Inspection Drawer**: Sliding right-hand drawer to inspect RSK-1042 without leaving the executive view.
- **Board Pack Generator Modal**: Customizable executive presentation generator with multi-select sections (Executive Summary, Top 10 Risks, Control Gaps, KRI Dashboard) and simulated PDF/PPTX export.

6.2 Operational Risk & Resilience Dashboard (`OperationalDashboard.tsx`)

- **Real-time Telemetry Bar**: Live segmented range selector (`24h`, `7d`, `30d`) with an interactive **"Sync Telemetry"** button that animates and updates stream health.
- **Incident Response Feed**: Live incident triage with instant **"Resolve Incident"** state updates.
- **Incident Creation Modal**: Form configuring title, P1–P4 severity, department, lead commander, and linked residual risk ID.
- **Business Continuity Drill Simulator**: Interactive **"Launch Failover Drill" Modal** executing automated chaos failover, recalculating tested RTO (5.4 mins) and verifying ISO 22301 / DORA SLAs.

6.3 My Work Workspace (`MyWorkWorkspace.tsx`)

- **Segmented Tabs**: Actions Due (4), Reviews Pending (2), Attestations (1).
- **Incremental Action Progress**: **"+20% Progress"** action increment button that automatically marks items as `Completed` upon reaching 100%.
- **Digital Attestation Sign-Off**: Interactive digital signature workflow recording date, user hash, and legal certification under SOX Section 404.

6.4 Risk Assessment Workspace (`RiskAssessmentWorkspace.tsx`)

- **Dedicated 5-Step Stepper**: Assessment Details → Likelihood & Impact → Control Effectiveness → Residual Risk → Review & Submit.
- **Dual Likelihood × Impact Matrix**: Configurable sliders recalculating inherent score (e.g. 4 × 5 = 20) and residual score (e.g. 3 × 3 = 9) in real time.
- **Control Rating Matrix**: Add/remove controls, configure preventive vs. detective efficacy, and visualize mitigated exposure reduction.

6.5 Scenarios & Stress Testing (`ScenariosKriWorkspace.tsx`)

- **Tail-Risk Stress Testing Runner**: Interactive modal featuring duration sliders (1–72 hours) and threat tier pickers computing financial loss ($M) and business disruption impact.

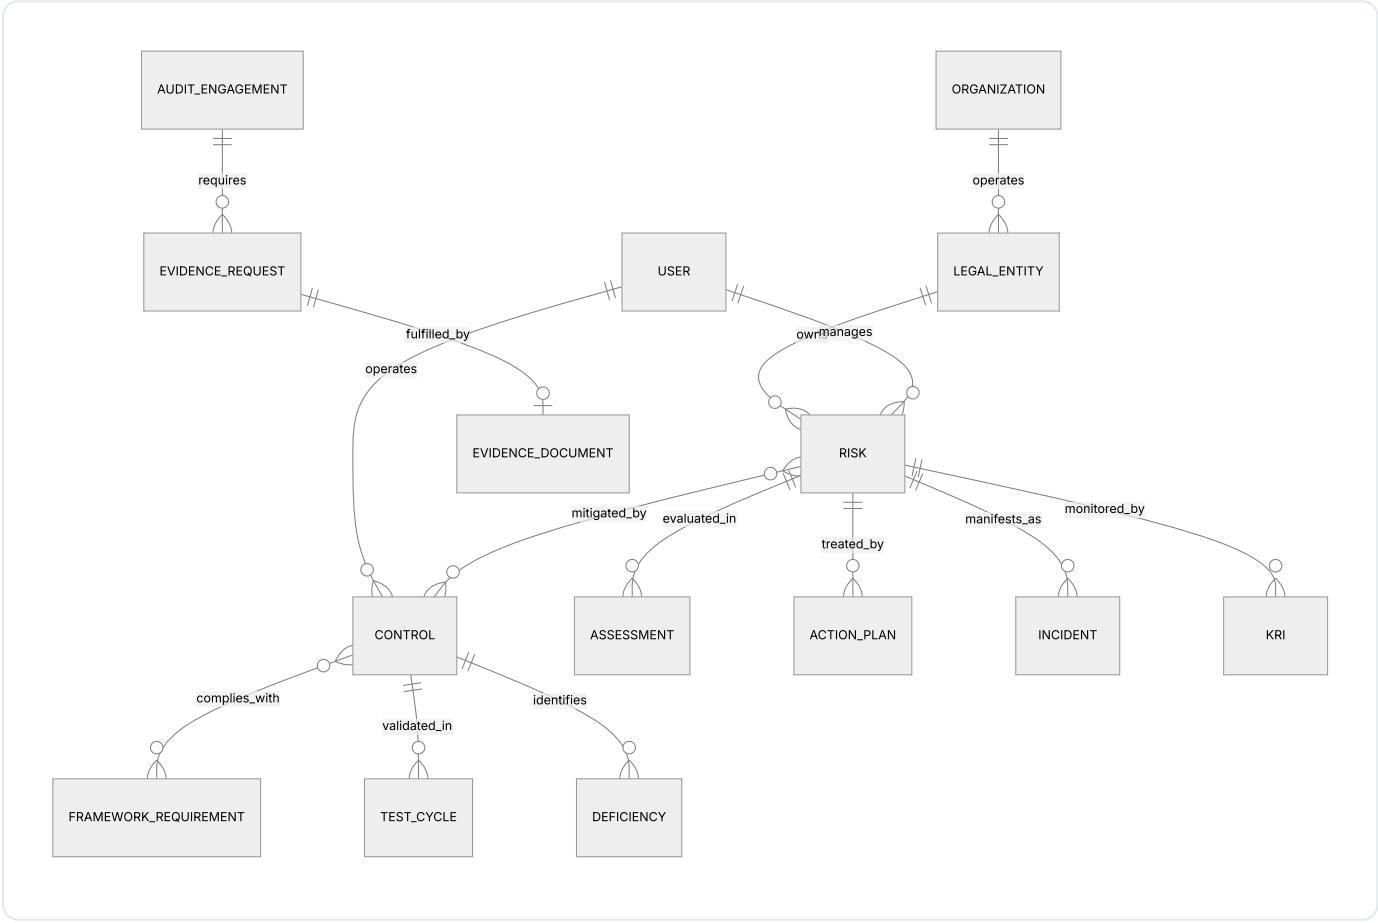

- **KRI Telemetry Dashboard**: Continuous monitoring of key risk indicators with amber warning and red breach status indicators.

6.6 Organization & Administration (`OrgAdminWorkspace.tsx`)

- **Risk Taxonomy Explorer**: Full 5-level hierarchical taxonomy (Financial, Operational, Technology, Regulatory, Strategic) with 19 operational branches.
- **Appetite Threshold Calibrator**: Interactive slider (4–20/25) that dynamically re-computes appetite breaches across all categories.
- **Settings Panels**: Real-time configuration for Workspace General, Scoring Models, Notifications, and Security & SSO.

---

7. Data Models & Entity Relationship Schema

7.1 Core TypeScript Interfaces

```
// Core Risk Record
export interface RiskRecord {
  id: string                    // e.g. "RSK-1042"
  title: string                 // "Cybersecurity Breach"
  category: RiskCategory        // "Technology & Cyber" | "Operational" | ...
  department: string            // "IT Infrastructure"
  owner: string                 // "James Wilson"
  status: 'Draft' | 'Assessing' | 'Mitigating' | 'Accepted' | 'Archived'
  inherentLikelihood: number    // 1 to 5
  inherentImpact: number        // 1 to 5
  inherentScore: number         // 1 to 25
  residualLikelihood: number    // 1 to 5
  residualImpact: number        // 1 to 5
  residualScore: number         // 1 to 25
  appetiteStatus: 'Within Appetite' | 'At Appetite' | 'Above Appetite'
  lastAssessed: string          // ISO date or formatted string
  nextReview: string
  linkedControls: string[]      // ["CTL-001", "CTL-002"]
  openActionsCount: number
}

// Control Record
export interface ControlRecord {
  id: string                    // e.g. "CTL-002"
  name: string                  // "Endpoint Detection & Response (EDR)"
  type: 'Preventive' | 'Detective' | 'Corrective'
  category: string              // "Technical" | "Administrative" | "Physical"
  owner: string
  department: string
  implementationStatus: 'Implemented' | 'In Progress' | 'Planned'
  effectiveness: 'Effective' | 'Partially Effective' | 'Ineffective'
  frequency: 'Continuous' | 'Daily' | 'Monthly' | 'Quarterly' | 'Annual'
  linkedRisks: string[]         // ["RSK-1042"]
  frameworkMappings: string[]   // ["ISO 27001: A.12.2.1", "SOC 2: CC7.1"]
}

// Operational Incident
export interface IncidentRecord {
  id: string                    // e.g. "INC-2026-88"
  title: string
  severity: 'P1 · Critical' | 'P2 · High' | 'P3 · Moderate' | 'P4 · Low'
  status: 'Investigating' | 'Mitigating' | 'Resolved'
  department: string
  lead: string
  linkedRiskId: string          // "RSK-1042"
  startedAt: string
  resolvedAt?: string
  financialLoss?: string
}

// Key Risk Indicator (KRI)
export interface KRIRecord {
  id: string                    // e.g. "KRI-OPS-02"
  name: string
  category: string
  currentValue: string
  amberThreshold: string
  redThreshold: string
  status: 'Normal' | 'Warning' | 'Breached'
  trend: string
```

```
  acknowledged: boolean
}
```

8. Technology Stack & Production Build

8.1 Stack Architecture

- **Frontend Core**: React 19 + TypeScript (Strict typing with `noUnusedLocals` enabled).
- **Styling**: Tailwind CSS v4 with custom enterprise utility classes and design tokens.
- **Component Primitives**: Radix UI / custom headless primitives + class-variance-authority (`cva`).
- **Icons**: Lucide React (feather-style crisp line icons).
- **Build Tooling**: Vite v8.3 (instant HMR and optimized Rollup minification).
- **CI/CD & Deployment**: GitHub Actions workflow (`.github/workflows/deploy.yml`) building and publishing production artifacts to GitHub Pages.

8.2 Build Performance

```
# Production Build Command
npm run build (tsc -b && vite build)

# Verified Build Output:
✓ built in 209ms
dist/index.html                     0.86 kB
dist/assets/index-DxT5pquK.css    125.94 kB
dist/assets/index-ChjoYpY8.js   1,187.57 kB
```

9. Strategic Product Roadmap

2026 Q4 (Delivered)	2027 Q1	2027 Q2	2027 Q3-Q4
• Design System & Shell	• Live API Integrations	• AI Copilot & Analysis	• Multi-Tenant Pla
• 40+ ERM Workspaces	• Continuous Controls (CCM)	• Monte Carlo Simulator	• SOC 2 Type II Ce
• 5x5 Matrix & Stepper	• Jira / ServiceNow Sync	• Predictive Drift Alerts	• FedRAMP High Bas

Phase 1: Foundation, Design System & Workspaces (Completed)

- [x] Foundation design system (Inter, JetBrains Mono, 5×5 severity bands, custom shadows).
- [x] Hierarchical navigation shell with collapsible submenus and `⌘K` global search.
- [x] Executive Dashboard, Operational Dashboard, and Personal Work Queue.
- [x] Risk Register, Risk Dossier, 5-step Risk Assessment, and 5×5 Heatmap.

- [x] Control Library, Testing Cycles, Deficiencies, Frameworks, and Policies.
- [x] Incident Triage, Internal Audit Plans, Evidence Upload Portal.
- [x] Scenario Stress Testing, KRIs, Board Pack Generator, and Appetite Calibrator.

Phase 2: Live Integrations & Continuous Control Monitoring (Q1 2027)

- [ ] **Automated Telemetry Connectors**: Direct webhooks for AWS Security Hub, Datadog, Okta System Log, and GitHub Audit Log to automatically feed KRIs.
- [ ] **Bi-directional Ticketing Sync**: Jira and ServiceNow integration to synchronize action item remediation progress in real time.
- [ ] **Continuous Control Monitoring (CCM)**: Automated daily validation of technical controls (e.g., verifying 100% MFA enforcement via Okta API).

Phase 3: AI Copilot & Quantitative Risk Analytics (Q2 2027)

- [ ] **RiskOS Copilot**: GenAI assistant for drafting risk descriptions, suggesting preventative controls based on industry incident databases, and identifying policy gaps.
- [ ] **Monte Carlo Quantitative Modeling**: FAIR (Factor Analysis of Information Risk) simulation engine computing Value-at-Risk (VaR) probability distributions.
- [ ] **Predictive Appetite Drift**: Machine learning models predicting likelihood of appetite threshold breaches 90 days in advance.

Phase 4: Enterprise Scale & Regulatory Certifications (Q3–Q4 2027)

- [ ] **Multi-Tenant Enterprise Architecture**: Granular RBAC, row-level tenant isolation, and custom legal entity permission boundaries.
- [ ] **Formal Certifications**: Independent SOC 2 Type II audit report and ISO 27001:2022 external certification.
- [ ] **FedRAMP High / GovCloud Support**: Government-grade data sovereignty and hardware security module (HSM) key management.

---

10. Enterprise User Guidelines & Operational Playbooks

This section serves as the official operational manual for all RiskOS users across the Three Lines of Defense.

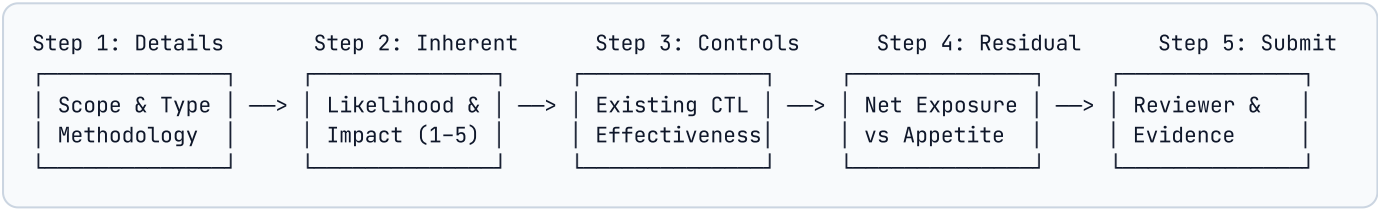

10.1 System Access, Shell Navigation & Keyboard Shortcuts

- **Global Search (`⌘K` / `Ctrl+K`)**:
  - Tap `⌘K` from anywhere in RiskOS to trigger the search command palette.
  - Search by **Risk ID** (`RSK-1042`), **Risk Title** (`Cybersecurity`), **Control ID** (`CTL-002`), or **Owner** (`Sarah Chen`). Press `Enter` to navigate directly to that record.

- **Sidebar Sub-menu Toggle**:
  - Click any parent navigation row or chevron (e.g., `Risk register`, `Controls`, `Organization`) to expand or collapse child routes.
  - Use `⌘[` to collapse the sidebar into icon-only mode when working on data-dense tables or matrix views.
- **Breadcrumb Navigation**:
  - The top breadcrumb trail (`Overview / Risk Management / RSK-1042 / Assessment`) updates dynamically and provides one-click navigation back to parent registers.

10.2 Playbook 1: How to Conduct a Risk Assessment (Line 1 / Risk Owners)

Use this playbook when conducting periodic risk reviews, assessing emerging threats, or evaluating changes in organizational posture.

1. **Accessing the Assessment**:
   - Navigate to **Risk register** (`risks-all`) or **My work** (`my-work-reviews`).
   - Select the target risk (e.g., `RSK-1042 · Cybersecurity Breach`) and click **"Re-Assess Risk"** or **"Start Assessment"**.
2. **Step 1: Assessment Details**:
   - Select **Assessment Type**: *Periodic Review*, *Initial Assessment*, or *Event-Triggered Review*.
   - Define assessment scope (e.g., *Core Enterprise Production Infrastructure*) and evaluation period.
3. **Step 2: Scoring Inherent Risk (Before Controls)**:
   - Evaluate **Inherent Likelihood (1–5)** based on external threat landscape and past occurrence frequency.
   - Evaluate **Inherent Impact (1–5)** using the Reference Criteria Matrix below (evaluating worst-case financial, regulatory, and operational exposure if no controls existed).
   - Review the computed **Inherent Score** ($L \times I$).
4. **Step 3: Evaluating Control Effectiveness**:
   - Review all linked controls (e.g., `CTL-001 Mandatory MFA`, `CTL-002 EDR`).
   - For each control, select its verified operational effectiveness:
     - **Effective**: Control operates consistently as designed; verified by testing (-60% to -80% exposure reduction).
     - **Partially Effective**: Control is implemented but exhibits periodic operational exceptions (-30% to -50% reduction).

- **Ineffective / Gap**: Control is planned, failed recent testing, or absent (0% reduction).

5. **Step 4: Residual Risk & Risk Appetite Validation**:
   - Review the computed **Residual Risk Score** after control mitigation.
   - Verify the **Risk Appetite Status**:
     - **Within Appetite** (Green): Residual score is below the board-approved category threshold. No urgent escalation required.
     - **Above Appetite** (Red): Residual score exceeds organizational tolerance. An **Action Plan** is mandatory before submission.
6. **Step 5: Review, Evidence & Submission**:
   - Document assessment rationale and attach supporting evidence (audit reports, penetration test summaries).
   - Click **"Submit for Review"**. Confirm reviewer dispatch in the modal dialog. The assessment locks into read-only state pending Line 2 sign-off.

10.3 Playbook 2: Managing & Testing Internal Controls (Line 2 / Compliance)

1. **Cataloging Controls in the Control Library**:
   - Navigate to **Controls → Control Library** (`controls-library`).
   - Click **"+ Create Control"**. Define Control ID (`CTL-00X`), Name, Control Type (*Preventive*, *Detective*, *Corrective*), Category (*Technical*, *Administrative*), and testing frequency (*Continuous*, *Monthly*, *Quarterly*).
   - Link the control to one or more organizational risks in the multi-select risk picker.
2. **Executing Control Effectiveness Tests**:
   - Navigate to **Controls → Control Testing** (`controls-testing`).
   - Select a scheduled test cycle (e.g., `TEST-2026-Q3-01`).
   - Review testing procedure and sample size (e.g., 25 privileged access change tickets).
   - Record the test outcome by clicking **"Pass Test"** (sets effectiveness to *Effective*) or **"Fail Test"** (automatically creates a control deficiency).
3. **Remediating Control Deficiencies**:
   - Under **Deficiencies & Gaps**, review open deficiencies.
   - Assign an owner and target closure date. Once verified, click **"Verify & Close"** to restore control rating.
4. **Signing Compliance Attestations**:
   - Navigate to **My work → Attestations** (`my-work-attestations`).
   - Review the certification scope (e.g., *SOX Section 404 ITGCs*).
   - Click **"Sign Attestation"** to apply a legally binding digital timestamp and certification hash.

10.4 Playbook 3: Incident Response & Operational Resilience (Ops / Line 1 & 2)

1. **Reporting an Operational Incident**:
   - Navigate to **Overview ➔ Operational Risk** (`dashboard-operations`) or **Incidents** (`incidents`).
   - Click **"+ Report Incident"**.
   - Enter Incident Title, select Severity (*P1 Critical*, *P2 High*, *P3 Moderate*), Department, and Incident Commander Lead.
   - **Crucial Step**: Link the incident to its underlying **Residual Risk ID** (e.g., `RSK-1042`). This automatically updates risk exposure telemetry for executive visibility.
2. **Monitoring KRIs & Acknowledging Breaches**:
   - Check the **Key Risk Indicators** grid. Breached KRIs (red status) indicate operational thresholds exceeded (e.g., *Batch failure rate > 0.25%*).
   - Click **"Acknowledge Breach"** to initiate a 14-day containment SLA.
3. **Executing Business Continuity / Chaos Drills**:
   - Under **Business Service Resilience (RTO / RPO)**, click **"Launch Failover Drill"**.
   - Select the target service (e.g., *Core Clearing Engine*). Click **"Execute Automated Drill"** to run a simulated primary zone failure. RiskOS records tested RTO and updates compliance badges under ISO 22301 and DORA standards.

10.5 Playbook 4: Internal Audit Engagements & Evidence Requests (Line 3 / Auditors)

1. **Managing the Audit Plan**:
   - Navigate to **Audits & reviews ➔ Audit plan** (`audits-plan`).
   - Review quarterly fieldwork schedules and click **"+ New Audit Engagement"** to launch review cycles.
2. **Requesting Evidence from Control Owners**:
   - Open the **Evidence requests** tab (`audits-evidence`). Click **"+ Request Evidence"**.
   - Specify title, target control, assignee, and submission deadline.
   - The assignee automatically receives an actionable task in their **My Work** dashboard.
3. **Reviewing and Verifying Evidence Packages**:
   - When an evidence package is submitted, click **"Upload Evidence Document"** to inspect uploaded artifacts.
   - Click **"Accept Artifact"** to approve evidence, or log an audit finding under **Issues & findings** (`issues`).

10.6 Playbook 5: Executive Governance & Board Reporting (CRO & Executive Board)

1. **Interpreting Macro Risk Posture**:
   - Navigate to **Overview ➔ Executive Overview** (`dashboard-executive`).

- Review the **Overall Risk Posture Bar** (Inventory distribution across Critical, High, Moderate, Low).
- Check the **Risk Exposure Trend** chart: track whether net residual exposure ($M) is decreasing over time.

2. **Drilling into the 5×5 Matrix Heatmap**:
   - Navigate to **Risk register ➔ Heat map** (`risks-heat-map`).
   - Toggle between **Inherent Risk** and **Residual Risk** to visually observe how controls shift the organization's risk profile from the top-right critical quadrant toward the safe zone.
   - Click any coordinate cell (e.g., coordinate `[Likelihood: 4, Impact: 4]`) to inspect every risk situated in that severity coordinate.
3. **Generating Board Risk Packs**:
   - Click **"Export Report"** or **"Generate Board Pack"**.
   - Customize reporting sections (Executive Summary, Top Risks, Control Gaps, KRI Dashboard).
   - Download the finalized executive presentation for Board of Directors audit committee meetings.
4. **Calibrating Organizational Risk Appetite**:
   - Navigate to **Org structure ➔ Risk appetite** (`org-appetite`).
   - Click **"Calibrate Threshold"**. Use the interactive threshold slider (4–20/25) to adjust tolerance. RiskOS immediately recalculates which risk categories are *Within Appetite*, *At Appetite*, or *Above Appetite*.

10.7 Risk Scoring Reference Criteria Matrix

Use these standardized enterprise criteria during Step 2 of the assessment to eliminate subjective scoring bias:

Rating Band	Likelihood Criteria (Probability)	Financial Impact	Operational Disruption	Regulatory & Compliance Impact
5 — Catastrophic / Almost Certain	> 80% probability; expected to occur multiple times per year	> $10,000,000 loss	Complete core business shutdown > 24 hours	Criminal sanctions, charter revocation, material public scandal
4 — Major / Likely	50% – 80% probability; expected once per year	$2,500,000 – $10,000,000 loss	Critical customer-facing services degraded > 8 hours	Formal regulatory investigation, enforcement decree, major fines
3 — Moderate / Possible	20% – 50% probability; expected once every 1–3 years	$500,000 – $2,500,000 loss	Non-critical service outage; failover recovered within SLA	Regulatory inquiry, standard remediation requirement
2 — Minor / Unlikely	5% – 20% probability; expected once every 3–5 years	$100,000 – $500,000 loss	Minor localized disruption; resolved without customer impact	Internal audit finding; informal supervisory notice
1 — Insignificant / Rare	< 5% probability; exceptional circumstances only	< $100,000 loss	Negligible disruption; routine operational containment	Minor procedural deviation; self-reported with zero penalty
